Research Projects

Human Geometry/Animation Generation — KAUST GenAI 2024-present

- Proposed a diffusion-based 3D human geometry generation method, which introduces a novel geometry representation capable of synthesizing high-fidelity geometries with realistic clothing details, including challenging loose parts.
- Proposed a 4D human geometry generation framework that modeling natural clothing dynamics with fine-grained geometric details.

Human Motion Generation — Zhejiang University 2021-2024

- Proposed a high-quality motion in-between system adopted by Tencent, reducing manual effort and supporting real-time deployment.
- Led a colleague to incorporate the style control into the in-between system, extending its usability across animation scenarios.
- Developed a fine-grained motion editing framework with precise control over trajectory, contact, and style, enhancing the animation toolset.

Vulkan-based Cross-platform Particle System Engine — Zhejiang University 2020-2021

- Led two colleagues to develop a particle simulation, animation, and rendering engine tailored to Oppo's design requirements, optimized for resource-constrained platforms.

Parametric Facial Editing — Zhejiang University 2019-2021

- Led a colleague in developing a video editing method for efficient portrait reshaping, achieving smooth and natural retouching results.
- Contributed to a portrait reshaping pipeline, with key contributions in 3D projection, semantic warping, and distortion-aware optimization.

Virtual Reality — Zhejiang University 2018-2019

- Designed a VR modeling tool based on convolution surfaces, enabling real-time mesh generation with efficient GPU acceleration.
- Proposed a shape-constrained fireworks simulation method with rich textures in an HMD-based VR environment.
